

DoWaba AI for PrestaShop

Integration Guide — connect your store in under 2 minutes

MODULE v0.2.9

PrestaShop 1.7.x & 8.x

PHP 8.0+

What this module does

DoWaba AI is a **connector**. It does not change your storefront. It securely exposes your PrestaShop catalog (products, stock, categories, orders) to the **DoWaba AI** sales platform, so your customers can search, compare and order through **WhatsApp**, **Instagram DM** and **TikTok**. Your data stays in your shop — DoWaba reads it on demand through a signed REST endpoint.

For PrestaShop validators: a ready-to-use DoWaba test account is provided in **Section 4** (2-factor login is waived for it). Install the module on your own test shop, click **Connect to DoWaba**, log in with the test account and complete the import — no sign-up needed.

1. Install the module

1. In PrestaShop admin, open **Modules** → **Module Manager** → **Upload a module**.
2. Drop `dowaba-ai-prestashop-0.2.9.zip`. PrestaShop installs and enables it.
3. Click **Configure** on the "DoWaba AI" row.

2. Connect — one click

The Configure screen opens with a **"Connect to DoWaba in 3 steps"** panel at the top.

- 1 In the settings form, switch **Module enabled = ON** and **Read scope = ON** (turn on **Write scope** too if you want the AI to place orders), then click **Save**.

Configure

DoWaba AI — Sell on WhatsApp, Instagram & TikTok

Back Translate Manage hooks

Connect to DoWaba in 3 steps

- Below, turn ON "Module enabled" and "Read scope", then click Save.
- Click "Regenerate API Key" and copy the key shown once.
- Click "Connect to DoWaba", choose your store and paste the key — done.

[CONNECT TO DOWABA](#)

No DoWaba account yet? You can create one for free during this step. PrestaShop reviewers: test credentials are in the integration guide PDF (docs/ folder of this module).

Manifest URL & API Key

Manifest URL (copy to DoWaba "Connect store")

`http://localhost:8091/index.php?fc=module&module=dowaba_ai&controller=manifest`

Current API Key

`psm_d94c2c68...` (hash stored)

[Regenerate API Key](#)

DoWaba AI Settings

Module enabled ☒ Yes

Read scope (products, orders, customers) ☒ Yes

Write scope (AI can create orders) ☒ Yes

AI can place orders on behalf of customers — only with explicit 2-step confirmation.

IP Whitelist (optional)

Comma-separated. Empty = no restriction. DoWaba prod IPs: 178.105.68.170, 49.13.120.112

Audit retention (days)

Manifest base URL override (optional)

Leave empty for auto-detect. Use this for Cloudflare tunnel / reverse proxy setups.

[SAVE](#)

The module Configure screen: the "Connect to DoWaba in 3 steps" panel, the Manifest URL & API Key, and the settings switches.

- Click  **Regenerate API Key**. The key is shown once (and stored hashed). A green box appears with a **"Finish on DoWaba →"** button.

Comma-separated. Empty = no restriction. DoWaba prod IPs: 178.105.68.170, 49.13.120.112

Audit retention (days)

30

Manifest base URL override (optional)

Leave empty for auto-detect. Use this for Cloudflare tunnel / reverse proxy setups.

SAVE

After "Regenerate API Key": the one-time key and the green "Finish on DoWaba →" one-click button.

- Click **"Finish on DoWaba →"**. DoWaba opens with your **Manifest URL and API Key already filled in** (the key travels in the URL fragment, so it is never logged on any server). Log in (or create a free account), pick your store, and click **Connect & Import**.

Connect your store to DoWaba

Use the Manifest URL and API Key from your store plugin. The AI functions are imported automatically.

 Connect & Import

You'll find the Manifest URL and API Key on your store plugin's settings page. No account yet? You can create one for free in this step.

The DoWaba "Connect your store" page — Manifest URL and API Key pre-filled, store selector, and the "Connect & Import" button.

Connect your store to DoWaba

Use the Manifest URL and API Key from your store plugin. The AI functions are imported automatically.

Eklenen fonksiyonlar otomatik olarak aktive edildi — kullanıma hazır.

psm_product_search psm_product_detail psm_product_compare
psm_stock_check psm_category_list psm_order_status
psm_customer_lookup psm_cart_recover psm_order_preview
psm_order_confirm

[Go to site integrations](#)

You'll find the Manifest URL and API Key on your store plugin's settings page. No account yet? You can create one for free in this step.

Success: the 10 AI functions are imported and activated automatically. Integration complete.

Manual alternative: instead of the one-click button, copy the **Manifest URL** and **API Key** from the module, then on DoWaba open **Integrations** → "**Connect store**" (top of the page), paste both, pick your store and click **Connect & Import**.

3. How synchronization works & how to verify

DoWaba does **not** copy your catalog. Synchronization is **live and on demand**: when a customer asks something on WhatsApp/Instagram/TikTok, the AI calls the matching function on your PrestaShop store in real time and returns the current data — always up to date, nothing stored externally, limited to the scopes you enabled.

Function	What the AI can do	Scope
<code>product_search</code> · <code>product_detail</code> · <code>product_compare</code>	Find, detail and compare products	read
<code>stock_check</code> · <code>category_list</code>	Live stock & category browsing	read
<code>order_status</code> · <code>customer_lookup</code> · <code>cart_recover</code>	Order status, customer lookup, cart recovery	read
<code>order_preview</code>	Build an order summary before confirming	read
<code>order_confirm</code>	Create the actual order (2-step confirmation)	write

Verify it works: after the import (screenshot above), open the connected channel (or the built-in test chat on the DoWaba site) and send "Show me your products" or "Is product X in stock?". The AI replies with real products pulled live from the store.

4. Test access for PrestaShop validators

DoWaba test account (2-factor login waived — no mailbox needed):

Login URL: **<https://dowaba.com/admin/login>**

Email: **prestashop-reviewer@dowaba.com**

Password: **PrestaReview-2026**

A store named "**Reviewer Test Store**" is already created on this account, ready for the import.

How to validate: install the module on your own PrestaShop test shop → **Configure** → **Regenerate API Key** → **Finish on DoWaba** →. Log in with the test account above → pick "Reviewer Test Store" → **Connect & Import**. You will see the 10 functions import (as in the screenshot in Section 2). The whole flow takes under two minutes.

5. Troubleshooting

Symptom	Fix
"Manifest could not be fetched"	The Manifest URL must be reachable publicly — open it in a browser, it must return JSON. Behind a proxy? Set Manifest base URL override in the module.
"Invalid API key" / 401	Regenerate the key in the module and use the fresh one (the old key is replaced on each regenerate).
Import works but no data	Turn ON Module enabled and Read scope , then Save.
403 from the store	An IP Whitelist is set that excludes DoWaba. Clear it for first setup.
