

Dowaba AI Connector

Installation & User Guide — Magento 2 (Open Source & Adobe Commerce)

Version 0.1.0 · Module: [Dowaba_AiConnector](#) · Composer: [dowaba/module-ai-connector](#) · Publisher: ACR YAPAY ZEKA (Dowaba) · License: MIT

1. Overview

Dowaba AI Connector links your Magento store to the **Dowaba AI** platform. Your customers message in natural language from their favorite channel —**WhatsApp, Instagram DM, email or phone** — and an AI assistant answers using your store's live catalog, stock and order data. It is multilingual (30+ languages) and available 24/7.

The module exposes a secure, read/write JSON API (a *manifest* of 10 AI functions) that the Dowaba platform calls on the customer's behalf. No customer data is stored by the module beyond a short-lived audit log.

```
Customer (WhatsApp): "Do you have the iPhone 15 Pro? How much?"
Dowaba AI      : "Yes, in stock. $1,099. Color options..."
Customer      : "I'd like to order one"
Dowaba AI      : "Summary: iPhone 15 Pro x 1 = $1,099 + shipping. Confirm?"
Customer      : "Yes"
Dowaba AI      : "Order placed #000000123"
```

2. The 10 AI Functions

Function	Scope	What it does
mgm_product_search	read	Search products by name or SKU
mgm_product_detail	read	Full product info, attributes and image gallery
mgm_product_compare	read	Compare 2–3 products side by side
mgm_stock_check	read	Real-time stock lookup (StockRegistry)
mgm_category_list	read	Category tree
mgm_order_status	read	Order tracking (order number + email match)
mgm_customer_lookup	read	Customer profile + last 5 orders (privacy-safe)
mgm_cart_recover	read	Cart reminder link
mgm_order_preview	write	Order summary shown to the customer before confirmation
mgm_order_confirm	write	Create the order (Quote → guest order, replay-protected)

3. Installation

3.1 Install the module

Option A — Composer (recommended):

```
composer require dowaba/module-ai-connector
```

Option B — Manual (ZIP): download the [app/code](#) package from the GitHub Releases page and extract it at your Magento root so the files land in `app/code/Dowaba/AiConnector/`.

3.2 Enable

```
bin/magento module:enable Dowaba_AiConnector
bin/magento setup:upgrade
bin/magento setup:di:compile # production mode only
bin/magento cache:flush
```

`setup:upgrade` automatically creates the `dowaba_ai_audit` table via Magento's declarative schema. No manual SQL is required.

4. Admin Setup Wizard

In the Magento admin, open **Dowaba AI** → **Setup & Settings** and complete the 5 steps:

1. **Generate API Key** — a `mgm_...` Bearer key is created (shown once; copy it).
2. **Manifest URL** — copy your store's manifest endpoint: `https://your-store.com/dowaba_ai/manifest`
3. **Activation & Permissions** — enable the module, choose `read` (on by default) and `write` (required for order creation).
4. **Security (optional)** — add an IP whitelist of Dowaba's outbound IPs.
5. **Connection Test** — confirm the green check.

5. Connect to the Dowaba Panel

1. Go to `dowaba.com` → **Sites** → your site → **Integrations** → **Bundle Import**.
2. Paste the **Manifest URL** and the **API Key** → click **Import**.
3. All 10 functions are registered automatically.
4. **Test**: from your WhatsApp Business line, message as a customer — e.g. *"What phones do you have?"* — the AI replies with your live catalog.

6. Security

Layer	Detail
Bearer auth	<code>Authorization: Bearer mgm_...</code> — sha256 hashed comparison, never stored in plaintext
Header fallback	<code>?token=</code> query fallback for servers that strip the Authorization header (hash still verified)
IP whitelist	Optional comma-separated allow-list
Scope guard	<code>read</code> default ON / <code>write</code> default OFF — order creation is opt-in
Order preview	Customer confirmation required before an order is created (one-shot, replay-protected)
Audit log	Every API request is logged to <code>dowaba_ai_audit</code> (30-day retention)
CSRF	Endpoint is Bearer-protected (CSRF-exempt machine-to-machine API)

7. Compatibility

Version	Magento	PHP
v0.1.x	2.4.4 – 2.4.7 · Open Source & Adobe Commerce	8.1 / 8.2 / 8.3

8. Support
